Under-Canopy Agricultural Robots

Challenges in Under-Canopy Navigation

- Unreliable GPS, LiDAR
- Lots of occlusion and clutter
- Large variability in appearance of soil and crops
- Small margin of error due to tight space and speed

View from on-board camera of the robot

CropFollow++ Contributions

- A modular, interpretable, and anomaly-aware under-canopy navigation system with semantic keypoints
- Deployment over 25km on multiple under-canopy cover crop planting robots
- Discussion of various failure modes during deployment

Outlier Detection Heuristics

- Variance of vanishing point heatmap enables anomaly detection
- Heuristic check on geometry of triangle filters false positives in intercept keypoints
